Note: This publication contains data about the family status of civilians who are usual residents of private dwellings. Certain classes of families are excluded (e.g. families with at least one member living in a non-private dwelling, families which include a member of the permanent defence forces) - see *Coverage* in the Explanatory Notes. Some 94 per cent of the civilian population aged 15 and over are represented by the estimates given in this publication.

SUMMARY OF FINDINGS

Overview

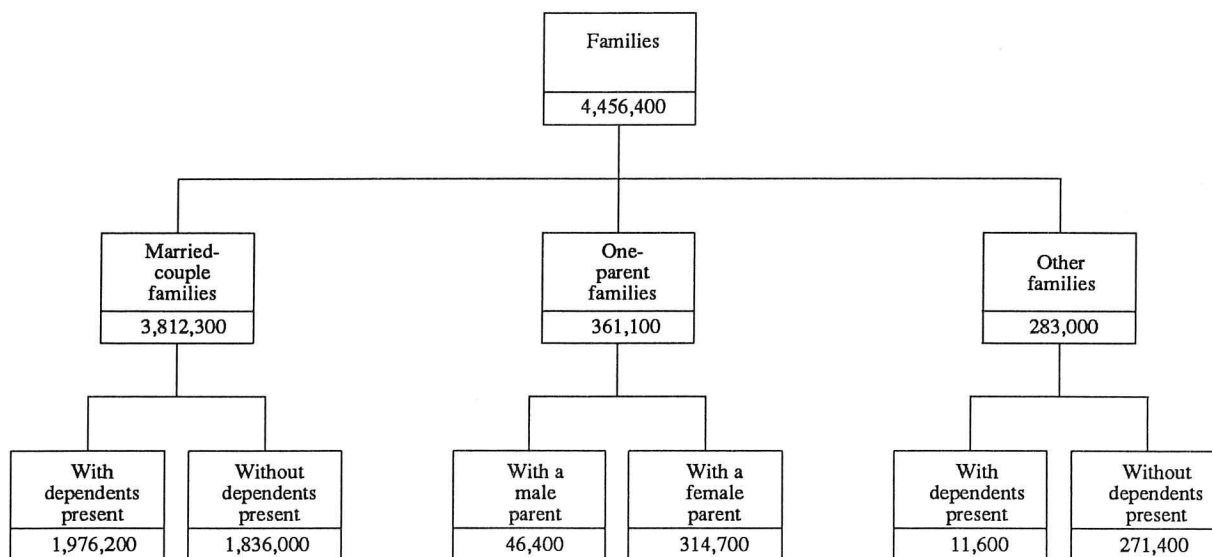

Of the 12,433,500 persons aged 15 years and over who were usual residents of private dwellings in Australia in June 1990 and for whom family status could be determined, 85 per cent were members of families.

These persons were members of 4,456,400 families and some 86 per cent of families were *married-couple families* – a little more than half of which had dependents present. Of the 361,100 *one-parent families* 13 per cent had a male parent, compared with 11 per cent in June 1989.

An estimated 21 per cent of *all families* had no family members employed, 28 per cent had one family member employed and a further 51 per cent had two or more family members employed.

Of the 1,837,700 persons who were not members of a family, 59 per cent lived alone.

DIAGRAM 1: AUSTRALIAN FAMILIES, JUNE 1990

Source: Table 2.

Married-couple families

In June 1990, 52 per cent of *married-couple families* had both partners in the labour force and 29 per cent had only one partner in the labour force. Of the *married-couple families* with both partners in the labour force, 60 per cent had dependents present while 90 per cent of *married-couple families* with neither partner in the labour force had no dependents present.

DIAGRAM 2: PERCENTAGE OF MARRIED-COUPLE FAMILIES (WITH OR WITHOUT DEPENDENTS PRESENT) BY LABOUR FORCE STATUS OF HUSBAND AND WIFE, JUNE 1990

For 49 per cent of *married-couple families*, both partners were employed. This proportion varied according to whether or not dependents were present and also according to location. The proportion of *married-couple families* having both partners employed was highest in the Northern Territory (65%) followed by the Australian Capital Territory with 58 per cent. In the States the proportion ranged from 43 per cent in Tasmania to 51 per cent in Victoria.

DIAGRAM 3: PERCENTAGE OF MARRIED-COUPLE FAMILIES (WITH OR WITHOUT DEPENDENTS PRESENT) WITH BOTH PARTNERS EMPLOYED, BY STATE/TERRITORY, JUNE 1990

For *married-couple families* with both partners employed, 51 per cent had both partners employed on a full-time basis. As diagram 4 shows, in recent years the proportion of *married-couple families*, with or without dependents present, in which both partners were employed full-time has been generally increasing.

DIAGRAM 4: PERCENTAGE OF MARRIED-COUPLE FAMILIES (WITH OR WITHOUT DEPENDENTS PRESENT), IN WHICH BOTH HUSBAND AND WIFE WERE EMPLOYED FULL TIME

Source: Table 10

Some 30 per cent of *married-couple families* had only one partner employed and in 92 per cent of these families the other partner was not in the labour force. In 91 per cent of those *married-couple families* with only one partner employed, the employed person was the husband. The proportion of *married-couple families* with only one partner employed varied according to whether or not dependents were present, and according to location.

DIAGRAM 5: PERCENTAGE OF MARRIED-COUPLE FAMILIES (WITH OR WITHOUT DEPENDENTS PRESENT), WITH ONLY ONE PARTNER EMPLOYED, BY STATE/TERRITORY, JUNE 1990

Source: Table 15

One-parent families

In June 1990 8 per cent of all families were *one-parent families*. For 87 per cent of these families the parent was female. Some 45 per cent of female parents were employed, 58 per cent of whom were in full-time employment. Male parents were employed in 75 per cent of instances, 93 per cent of those being full time. The percentage of *one-parent families* with the parent employed was greater where the parent was male, irrespective of the age of youngest dependent. The percentage of *one-parent families* with the parent employed generally increased as the age of youngest dependent increased.

DIAGRAM 6: PERCENTAGE OF ONE-PARENT FAMILIES WITH THE PARENT EMPLOYED, BY AGE OF YOUNGEST DEPENDENT, JUNE 1990

In 49 per cent of *one-parent families* the parent was employed. Of the other *one-parent families*, almost 87 per cent were families where the parent was not in the labour force. The percentage of *one-parent families* with the parent not in the labour force varied according to the sex of the parent and the age of the youngest dependent. In general, as the age of the youngest dependent increases, the percentage of *one-parent families* with the parent not in the labour force decreases. For any given age of youngest dependent, the percentage of *one-parent families* with the parent not in the labour force is higher for families with a female parent than for those with a male parent.

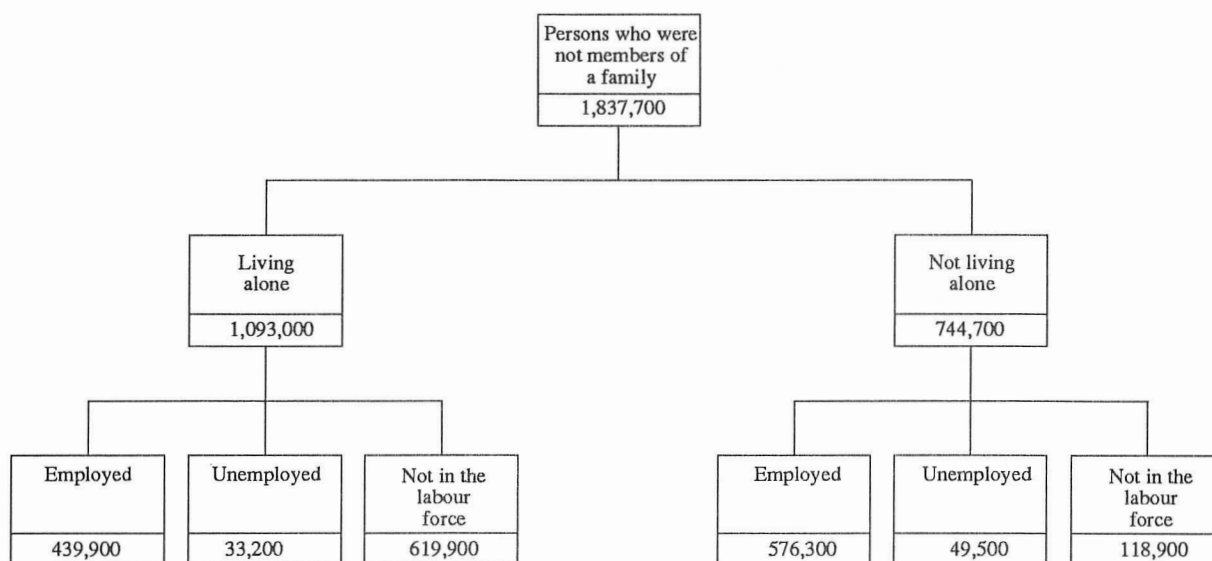

DIAGRAM 7: PERCENTAGE OF ONE-PARENT FAMILIES WITH THE PARENT NOT IN THE LABOUR FORCE, BY AGE OF YOUNGEST DEPENDENT, JUNE 1990

For 7 per cent of *one-parent families* the parent was unemployed. Of the families with the parent unemployed, 19 per cent of the parents had been unemployed for one year or longer. The average duration of unemployment of parents was about 30 weeks, with the average for female parents being 28 weeks, and the average for male parents being 62 weeks.

Persons who were not members of a family

DIAGRAM 8: LABOUR FORCE STATUS OF PERSONS WHO WERE NOT MEMBERS OF A FAMILY, JUNE 1990

Source: Table 1.

Selected characteristics of persons who were not members of a family and were **living alone** in June 1990—

- Some 60 per cent were females and 73 per cent of these were aged 55 years and over. Of the males living alone 40 per cent were aged 25 to 44 years, and 41 per cent were aged 55 years and over.
- An estimated 40 per cent were employed, although this proportion varied between males and females, with 60 per cent of males living alone employed and of females living alone 30 per cent were employed.
- The proportion of the population aged 15 years and over who were living alone was about 8 per cent, ranging from 7 per cent in the Australian Capital Territory to 11 per cent in the Northern Territory.

Selected characteristics of persons who were not members of a family and were **not living alone** in June 1990—

- Some 57 per cent were males and 70 per cent of these men were aged between 20 and 34 years. About two-thirds of the females were in this age group.
- An estimated 77 per cent were employed, with the proportion being slightly lower for females than males. The vast majority (90%) of these males were employed full time, as were 80 per cent of the females.
- Three out of four such persons were born in Australia. Among these people 79 per cent were employed, 7 per cent were unemployed, and 14 per cent were not in the labour force. Comparable estimates for persons born overseas were 74 per cent, 6 per cent and 21 per cent respectively. For persons born outside English-speaking countries the estimates were: employed, 64 per cent; unemployed, 5 per cent; not in the labour force, 31 per cent.

(a) Civilians who were residents of households where family status was determined. For further details see paragraphs 7 and 8 of the Explanatory Notes. (b) Excludes persons aged 20-24 attending school. Also excludes full-time students aged 15-24 who are classified as husbands, wives, sole parents or other family heads. (c) Aged 15 and over.

EXPLANATORY NOTES

Introduction

In June 1990, details of the labour force status of family members and family composition were derived from the labour force survey part of the monthly population survey.

2. Table 1 summarises the *family status of persons* aged 15 and over. Tables 2 to 30 show information about *married-couple*, *one-parent* and *other families* — for example, number of dependents present, labour force status of husband, wife or family head — while Tables 31 to 39 contain more detailed estimates of the *family status of persons* aged 15 and over classified by age, birthplace and other variables.

The population survey

3. The population survey is based on a multi-stage area sample of private dwellings (about 31,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.) and covers about three-fifths of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews for this survey were conducted during the two weeks beginning on Monday 11 June 1990. The information obtained relates to the week before the interview (i.e. the reference week).

Scope

4. The labour force survey includes all persons aged 15 and over except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependents) stationed in Australia.

Coverage

5. In the labour force survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible.

6. Persons who are away overseas from their usual residence for less than six weeks at the time of interview are generally enumerated at their usual residence when relevant information can be obtained from other usual residents present at the time of the survey. Persons who, at the time of interview, are overseas for six weeks or more but

for less than twelve months are included in the estimates on the assumption that their labour force characteristics are similar to those of the persons responding in the survey.

7. Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, caravan parks, hospitals, etc.). The determination of family structure and family characteristics in such cases is most difficult. Thus for this family survey, scope was further restricted to usual residents of private dwellings and the following persons were excluded:

- (a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
- (b) persons enumerated as visitors to (rather than usual residents of) private dwellings.

8. In addition, in those households where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from this family survey because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from this family survey. This also applies to households from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. Table 1 summarises those persons for whom family information was obtained as well as those usual residents of private dwellings for whom complete family information could not be obtained, and those persons specifically excluded from the scope of this family survey.

Comparability of series

9. Estimates for the June 1989 and subsequent surveys are based on population estimates derived from the results of the 1986 Census of Population and Housing (adjusted for underenumeration). Estimates for surveys conducted in July 1983, July 1984, July 1985, June 1986, June 1987 and June 1988 were based on 1981 census results.

10. Commencing with the June 1989 issue, the category *other families* was split into *one-parent families* and *other families*. Therefore these estimates are not strictly comparable with estimates in previous issues. However, in June 1988, 98 per cent of *other families* with dependents were *one-parent families*. For definitions of these terms refer to the Glossary.

11. Estimates of the number of husbands and wives with dependents in June 1988, as published in selected tables in the June 1989 issue of this publication, are slightly higher than those published in the June 1988 issue. The estimates of the number of husbands and wives without dependents are correspondingly lower. This is due to a small error made at the computer processing stage of the production of family status estimates in the June 1988 issue of this publication.

12. For the July 1982 and previous surveys office imputation was undertaken to determine the family status of those persons enumerated in private dwellings where family information could not be obtained for all usual residents, and for those persons enumerated in non-private dwellings or as visitors to private dwellings where family information could not be obtained for each member of the family. Due to the increased demand for family data on a consistent and more regular basis, it was decided to change the processing methodology to eliminate office imputation and rely solely on the reported information. Consequently the scope of the July 1983 and subsequent surveys was narrowed to exclude those three groups of respondents for whom it is known that complete family information is difficult to collect (see paragraphs 7 and 8).

13. Surveys from July 1983 onwards are thus not strictly comparable with previous surveys since the persons excluded may have differing family and labour force characteristics to those persons included in the survey. Because of these exclusions the total number of persons with particular family characteristics will also differ between surveys conducted prior to July 1983 and those conducted from July 1983 onwards. Table 1 shows the number of persons excluded from the survey.

14. In the July 1985 and previous surveys, dependents (then described as dependent children) comprised all family members under 15 years of age and all family members aged 15 to 20 who were full-time students, except those classified as husbands, wives or other family heads. The current definition is given in the Glossary. Tables 24, 25 and 31 of the June 1986 issue of this publication provide an indication of the differences between the student component of the old and new definitions.

15. Since the July 1985 survey was conducted, the definition of employed persons has been extended to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. unpaid family helpers). This new definition aligns the Australian labour force concepts with a set of changed international definitions adopted by the International Labour Office at the 13th Conference of Labour Statisticians in October 1982.

16. Previously, such persons who worked 1 to 14 hours or who had such a job but were not at work were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. The changes in definition resulted in employment for March 1986 increasing by 34,900 and unemployment decreasing by 5,800.

17. Estimates of the number of families in June 1986 and subsequent years have been calculated differently to those for earlier years. This is due to the adoption of a new weighting procedure where the family weight is determined using an average of all family members responding to the labour force survey. Previously, the family weight used to publish estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family.

18. For these reasons, estimates for the June 1986 and subsequent surveys are not strictly comparable with those for earlier surveys. Although comparisons may generally be made, users should be aware of the above differences.

Reliability of the estimates

19. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they may differ from the figures that would have been produced if the information had been obtained from occupants of all dwellings. More information on this topic is given in the Technical Note.

TECHNICAL NOTE

Estimation procedure

Estimates of families and persons are derived from the population survey by use of a ratio estimation procedure, which ensures that estimates of persons conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

Reliability of the estimates

2. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The *sampling error* is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included in the survey. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the *relative standard error* which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.

3. Space does not allow for the separate indication of the standard errors of all estimates in this publication. Standard errors of estimates should be determined by using Table A, if necessary in conjunction with the factors given in paragraph 8 below.

4. The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.

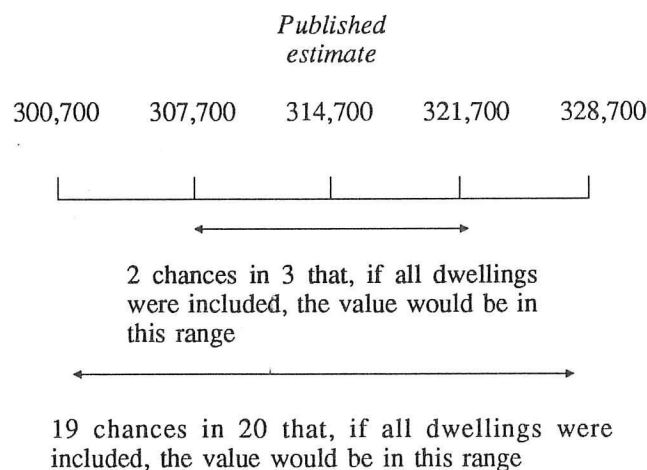

5. As the standard errors in Table A show, *the smaller the estimate the higher is the relative standard error*. Very small estimates are thus subject to such high relative standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently

reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high standard errors and should be used with caution. See paragraph 8 concerning the derivation of relative standard errors for some estimates.

6. The annual movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. Standard errors of all annual movements can be obtained by multiplying the figures in Table A by 1.3. When using Table A to calculate standard errors of annual movements, refer to the larger of the two estimates from which the movement is derived.

7. An example of the calculation and use of standard errors is given below:

- (a) From Table A it will be seen that the estimate of 314,700 one-parent families with a female parent in June 1990 has a standard error of about 7,000. Therefore, there are about two chances in three that the number that would have been obtained if all dwellings had been included in the survey would have been within the range 307,700 to 321,700 and about nineteen chances in twenty that it would have been within the range 300,700 to 328,700.

8. The relative standard errors of estimates of *average family size, average hours worked, average duration of unemployment and median duration of unemployment* are obtained by first finding the relative standard error of the estimate of the total number of persons or families contributing to the estimate (see Table A) and then multiplying the figure so obtained by the following relevant factors:

Average family size: 0.3
 Average hours worked: 0.7
 Average duration of unemployment: 1.3
 Median duration of unemployment: 2.0

9. An example of the calculation of standard errors by the use of these factors is as follows:

In June 1990 the estimate of median duration of unemployment for husbands of married-couple families was 26 weeks (from Table 21) and the number of families with the husband unemployed was estimated as 108,700. From Table A it can be calculated that this estimate (108,700) has a standard error of about 4,430 and therefore a relative standard error of about 4.1 per cent. The *relative standard error* of the estimate of median duration of unemployment is calculated by multiplying this figure (4.1) by the appropriate factor shown in the previous paragraph (in this case 2.0): $4.1 \times 2.0 = 8.2$ per cent. The *standard error* of this estimate of median duration of unemployment is therefore 8.2 per cent of 26, i.e. about 2.1. Therefore there are about two chances in three that the median duration of unemployment for unemployed husbands that would have been obtained if all dwellings had been included in the survey would have been within the range 24.0 to 28.0 weeks and about nineteen chances in twenty that it would have been within the range 22.0 to 30.0 weeks.

10. Proportions and percentages (for example, participation rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator.

The formula for the relative standard error (RSE) of a proportion or percentage is given below:

$$\text{RSE } (x/y) = \sqrt{[\text{RSE } (x)]^2 + [\text{RSE } (y)]^2}$$

11. Standard errors contained in Table A are designed to provide an average standard error applicable for all monthly labour force survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally equivalent to those shown in Table A, while standard errors of estimates of unemployment and not in the labour force are approximately 3 per cent and 11 per cent higher respectively. Standard errors of estimates of numbers of families are approximately the same as those for numbers of persons. Standard errors of estimates of persons born in Australia are approximately the same as those shown in Table A. For aggregate estimates of persons born outside Australia the standard errors are about 15 per cent higher. The standard errors vary for individual countries of birth, but are generally less than 10 per cent higher.

12. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the *non-sampling error*, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

TABLE A. STANDARD ERRORS OF ESTIMATES FROM DECEMBER 1987

| <i>Size of estimate (Number of families or persons)</i> | <i>NSW</i> | <i>Vic.</i> | <i>Qld</i> | <i>SA</i> | <i>WA</i> | <i>Tas.</i> | <i>NT</i> | <i>ACT</i> | <i>Australia</i> | |

TABLE B. LEVELS AT WHICH LABOUR FORCE ESTIMATES HAVE A RELATIVE STANDARD ERROR OF 25 PER CENT(a)
FROM DECEMBER 1987

| | <i>NSW</i> | <i>Vic.</i> | <i>Qld</i> | <i>SA</i> | <i>WA</i> | <i>Tas.</i> | <i>NT</i> | <i>ACT</i> | <i>Aust.</i> |
|----------------------------------|------------|-------------|------------|-----------|-----------|-------------|-----------|------------|--------------|
| Estimates(b) of— | | | | | | | | | |
| Average family size | 330 | 310 | 220 | 150 | 180 | 80 | 180 | 120 | 180 |
| Average hours worked | 2,300 | 2,300 | 1,500 | 1,100 | 1,200 | 700 | 1,000 | 800 | 1,700 |
| Average duration of unemployment | 7,300 | 7,300 | 4,900 | 3,400 | 3,800 | 2,000 | 3,200 | 2,300 | 6,000 |
| Median duration of unemployment | 15,900 | 15,900 | 10,600 | 7,300 | 8,100 | 4,200 | 7,000 | 4,700 | 14,000 |
| All other estimates | 4,500 | 4,500 | 3,000 | 2,100 | 2,300 | 1,300 | 2,000 | 1,400 | 3,500 |

(a) See paragraph 8 of this Technical Note. (b) The entries in this table refer to the number of families or persons contributing to the estimate.

GLOSSARY

Actively looking for work: Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Aggregate hours worked: The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Average hours worked: Aggregate hours worked by a group divided by the number of persons in that group.

Average duration of unemployment: For any group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Average family size: For any group of families, the total number of family members divided by the number of families in the group.

Dependents: All family members under 15 years of age; family members aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time, except those classified as husbands, wives, sole parents or other family heads.

Duration of unemployment: The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week.

Employed: Persons aged 15 and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and self-employed persons); or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because

of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Family: Two or more related persons (*relationship* includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- (a) sons or daughters of any age, if not married and with no children of their own present;
- (b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- (c) any children under 15 years of age who do not have a parent present.

Family head: Any person without a spouse present, but with a son or daughter aged under 15 present. Persons without a spouse, son or daughter aged under 15 present, but with a son or daughter aged 15 or over present, provided that the son or daughter has no spouse, son or daughter of his/her own present. If a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family. No family head is defined for a married-couple family.

Full-time workers: Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Household: A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.

Labour force: For any group, persons who were employed or unemployed, as defined.

Labour force status: A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Living alone: A person who is the sole member of a household.

Main English-speaking countries: The United Kingdom, Ireland, Canada, the United States of America, New Zealand and South Africa.

Marital status: Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.

Married-couple families: Families in which there are two married persons and these persons are husband and wife. See *Marital status*.

Median duration of unemployment: The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

Not a member of a family: A person who is not related to any other member of the household in which they are living.

Not in the labour force: Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.

One-parent families: Families in which there is a family head together with at least one dependent son or daughter of his/her own.

Other countries: All countries outside Australia other than the main English-speaking countries defined previously.

Other families: Families which are not married-couple families or one-parent families, as defined. They include families in which there is a parent with only non-dependent children present, and families in which there is no parent, for example a family head living with a brother or sister.

Participation rate: For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.

Part-time workers: Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Sole parent: The head of a one-parent family.

Unemployed: Persons aged 15 and over who were not employed during the reference week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
 - (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Unemployed looking for full-time work: Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

Unemployment rate: For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.
